

PROTECTO'S NEW ANTI CHOKE

The Most Humane Product Protecto Has ever Developed

- 1. Fasten Throat Latch first.
Snugly draw up throat latch, making sure the foam rubber fits into the Pocket of the horse's Jowl.**
- 2. Next fasten the cheeks and hook the Top strap to the crown's buckle.**
- 3. Hook overcheck to see that the Anti-Choke fits and stays in place.**
- 4. After you hook the overcheck , examine all straps and make final adjustments. The Anti-Choke should fit just a little snug when the overcheck is hooked up.**

Take the throat latch off the bridle. The Strap on the Anti-Choke with the two buckles will take the place of the throat latch. The Long strap with all the holes will go into the buckle on the Bridles Crown. Then you adust the straps to your horse.

You may find that the horse will resist the Anti - Choke the first time, so try it on your Training day. Almost all horsemen have said that when the horse realizes he can not choke down or fight you, you will have full authority.

U. S. Patent # 7,707,809
